Submitted to: IEEE Photonics Journal

Manuscript type: Review Article

Dear Editor-in-Chief,

We are pleased to submit our manuscript, Optical Integrated Sensing and Communication: A Systematic Review of Fiber, Free-Space, VLC/LiFi, and Photonic-THz Platforms, for consideration as a review article in *IEEE Photonics Journal*.

While O-ISAC is emerging as a core 6G enabler, the field remains fragmented across different optical modalities. To bridge these research silos, we conducted a PRISMA-compliant systematic review of 220 studies, delivering a cross-modality taxonomy and a standardized reporting contract to harmonize metrics across fiber, free-space, and THz platforms.

We believe this roadmap addresses a significant gap for the journal's audience by providing the engineering discipline needed to navigate multi-platform optical networks. This manuscript is original, is not under consideration elsewhere, and has been approved by all authors.

Thank you for your time and for the opportunity to share our work.

Sincerely,

Fatih Dönmez, Ahmet Altuncu, Mustafa Namdar
